

Exam 3 Revision Procedure

Due Friday, December 11, 12 pm

You may reclaim up to 50% of the points on any problem or sub-problem. For example, if on problem 1 you scored 8 points on part a), 4 points on part b), and 0 points on part c), you could possibly increase your grade on part b) to a total of 5 points and on part c) to a total of 5 points.

For each problem or sub-problem you wish to have considered, provide the following in writing.

1) Convince me you *now* understand the problem and solution. Since the solution is posted already, just writing down formulas is not enough. Clearly explain the problem, solution approach and the physics involved.

2) Explain why you think you missed that question. Any answer is OK, just be honest.
